Letter of Recommendation

To Whom It May Concern,

It is my pleasure to provide this letter of reference for Lukas Loveland in support of his application to the Maine Employer Recovery Contractor (MERC) Program. I had the opportunity to work closely with Lukas during our time at Greenheck Fan Corporation, where we collaborated on a number of technically challenging projects involving structural simulation, product development, and design validation.

Though I was not a client in the traditional sense, I often relied on Lukas in a way similar to how one might depend on a trusted engineering consultant. He consistently brought clarity to complex problems, skillfully balancing the big-picture strategic goals with the intricate technical details needed to deliver quality solutions. His collaborative style made him a linchpin in cross-functional efforts, and his ability to distill engineering complexity into actionable decisions was invaluable.

Lukas is a rare engineer who not only understands product development deeply but also communicates effectively with both technical and non-technical stakeholders. His insight, integrity, and professionalism would be a tremendous asset to any organization or project team—particularly those that require flexible, high-level engineering support without the overhead of a full-time hire.

I highly recommend Lukas for work through the MERC program. He is exceptionally qualified and will no doubt bring meaningful value to Maine businesses seeking technical leadership and smart engineering guidance.

Marton Gyuro

Sincerely,

Marton Gyuro
